```

AXI Lite based uart device.

Parameters

ADDRESS_WIDTH Width of the axi address bus

parameter

CLOCK_SPEED This is the aclk frequency in Hz

parameter

BAUD_RATE Serial Baud, this can be any value including non-standard.

parameter

PARITY_ENA Enable Parity for the data in and out.

parameter

PARITY_TYPE Set the parity type, 0 = even, 1 = odd, 2 = mark, 3 = space.

parameter

STOP_BITS Number of stop bits, 0 to crazy non-standard amounts.

parameter

DATA BITS Number of data bits, 1 to crazy non-standard amounts.

parameter

parameter

RX_DELAY Delay in rx data input.

PATAMETER RX BAUD DELAY

DELAY Delay in rx baud enable. This will delay when we sample a bit (default is

midpoint when rx delay is 0).

TX_DELAY Delay in tx data output. Delays the time to output of the data.

parameter

TX_BAUD_DELAY parameter

Delay in tx baud enable. This will delay the time the bit output starts.
