AXI Lite based uart device.

Parameters

ADDRESS_WIDTH Width of the address bus in bits.

parameter

BUS_WIDTH Width of the data bus in bytes.

parameter

CLOCK_SPEED This is the aclk frequency in Hz

parameter

BAUD_RATE Serial Baud, this can be any value including non-standard.

parameter

PARITY_ENA Enable Parity for the data in and out.

parameter

PARITY_TYPE Set the parity type, 0 = even, 1 = odd, 2 = mark, 3 = space.

parameter

STOP_BITS Number of stop bits, 0 to crazy non-standard amounts.

parameter

DATA_BITS Number of data bits, 1 to crazy non-standard amounts.

parameter

RX_DELAY Delay in rx data input.

parameter

RX BAUD DELAY

Delay in rx baud enable. This will delay when we sample a bit (default is

parameter midpoint when rx delay is 0).

TX DELAY Delay in tx data output. Delays the time to output of the data.

parameter

TX_BAUD_DELAY Delay in tx baud enable. This will delay the time the bit output starts.

parameter
